1. Sensor Overview

1.1 General Description

The GC1024 features 1280V x 720H resolution with 1/4-inch optical format, and 4-transistor pixel structure for low light image quality and low noise variations.

The full scale integration of high-performance and low-power functions makes the GC1024 best fit the design, and reduce implementation process. The superior image quality in both low light and high dynamic range scene makes it the perfect choice for a wide range of applications, including surveillance, automobile and HD video.

It provides RAW10 and RAW8 data formats with MIPI interface. It has a commonly used two-wire serial interface for host to control the operation of the whole sensor.

1.2 Features

- ◆ Standard optical format of 1/4 inch
- Output formats: Raw Bayer 10bit/8bit
- ◆ Power supply requirement: AVDD: 3.0~3.6V

DVDD:

DVP:1.5~1.8V

MIPI:1.8V

IOVDD: 1.7~3.6V

- PLL support
- Full size @ 60fps
- Windowing support
- MIPI interface support
- Horizontal/Vertical mirror

GC1024 DataSheet 4 / 30

- Image processing module
- High sensitivity for low-light operation
- Package: CSP

1.3 Application

- Cellular Phone Cameras
- Notebook and desktop PC cameras
- PDAs_
- Toys
- Digital still cameras and camcorders
- Video telephony and conferencing equipments
- Security systems
- Industrial and environmental systems
- Automobile video recorder

1.4 Technical Specifications

Parameter	Typical value
Optical Format	1/4 inch
Pixel Size	3.4um x 3.4um
Active pixel array	1296 x 742
ADC resolution	10 bit ADC
Max Frame rate	Full size@60fps
11100.	(PCLK>96M)
Power Supply	AVDD: 3.0~3.6V
	DVDD:
177	DVP:1.5~1.8V
Qi.	MIPI:1.8V
	IOVDD: 1.7~3.6V
Power Consumption	180mW(Active)
	<100uA(Standby)
SNR	41db
Dark Current	15mV/s @ 60°C

GC1024 DataSheet 5/30

Sensitivity	3000mV/(lux • s)
Operating temperature:	-30~70℃
Stable Image temperature	0~50℃
Optimal lens chief ray angle(CRA)	25° (non-linear)
Package type	CSP
	CUMEINE
2. Block Diagram	00.
2.1 Block Diagram	

2. Block Diagram

2.1 Block Diagram

GC1024 has an active image array of 1296x742 pixels. The active pixels are read out progressively through column/row driver circuits. In order to reduce fixed pattern noise, CDS circuits are adopted. The analog signal is transferred to digital signal by 10 bit A/D converter. The digital signals are processed in the ISP Block. Users can easily control these functions via two-wire serial interface bus.

3. Optical Specifications

3.1 Sensor Array Center

3.2 Pixel Array

GC1024 DataSheet 9 / 30

Pixel array is covered by Bayer pattern color filters. The primary color BG/GR array is arranged in line-alternating way.

If no flip in column, column is read out from 0 to 1295. If flip in column, column is read out from 1295 to 0.

If no flip in row, row is read out from 0 to 741. If flip in row, row is read out from 741 to 0.

3.3 Lens Chief Ray Angle (CRA)

Field(%)	Image Height(mm)	CRA(degrees)
0	0.000	0.0
5	0.125	2.4
10	0.250	4.7
15	0.374	7.0

3.4 Color Filter Spectral Characteristics

The optical spectrum of color filters is shown below

GC1024 DataSheet 11 / 30

4. Two-wire Serial Bus Communication

GC1024 Device Address:

serial bus write address = 0x78, serial bus read address = 0x79

4.1 Protocol

The host must perform the role of a communications master and GC1024 acts as either a slave receiver or transmitter. The master must do

- ◆ Generate the **Start(S)/Stop(P)** condition
- Provide the serial clock on SBCL.

Single Register Writing:

S 78H A Register Address A Data A P

Incremental Register Writing:

S	78H	Α	Register Address	Α	Data(1)	Α	 Data(N)	A	P	1
										W

Single Register Reading:

S	79H	Α	Register Address	Α	S	79H	Α	Data	NA	P	
---	-----	---	------------------	---	---	-----	---	------	----	---	--

Notes:

From master to slave	From slave to master
S: Start condition	P: Stop condition
A: Acknowledge bit	NA: No acknowledge

Register Address: Sensor register address

Data: Sensor register value

GC1024 DataSheet 12 / 30

4.2 Serial Bus Timing

GC1024 DataSheet 13 / 30

5. Applications

5.1 DVP Timing

Suppose Vsync is low active and Hsync is high active, and output format is RAW Bayer 10bit/8bit, then the timing of Vsync and Hsync is bellowing (take capture mode for example, preview mode is the same):

Ft =VB+ Vt +16(darkrow_line)(unit is row_time)

VB +16 = Bt + St + Et, Vblank/Dummy line, setting by register P0:0x07 and P0:0x08.

Ft -> Frame time, one frame time.

Bt -> Blank time, Vsync no active time.

St -> Start time, setting by register P0:0x13.

Et \rightarrow End time, setting by register P0:0x14.

Vt -> valid line time.Vt = win_height, win_height is setting by register P0:0x0d and P0:0x0e.

When exp_time \leq win_height+VB+16, Bt = VB+16 - St - Et. Frame rate is controlled by window_height + VB+16.

When exp_time > win_height + VB, Bt = exp_time - win_height - St - Et. Frame rate is controlled by exp_time.

The following is row_time calculate:

row_time = (Hb + Sh_delay + win_width /2+ 4)/HPCLK.

Hb -> HBlank or dummy pixel, Setting by register P0:0x05 and P0:0x06.

Sh_delay -> Setting by register P0:0x11, P0:0x12.

win_width -> Setting by register P0:0x0f and P0:0x10, win_width = final_output_width + 16. So for HD, we should set win_width as 1296.

GC1024 DataSheet 14 / 30

HPCLK -> half PCLK.

5.2 MIPI

5.2.1 Clock lane low-power

Notice:

- ◆ Clock must be reliable during high speed transmission and mode-switching.
- ◆ Clock can go to LP only if data lanes are in LP (and nothing relies on it).
- ◆ In Low-Power data lanes are conceptually asynchronous (independent of the high speed clock).

T_{CLK PRE}: setting by Register P3: 0x24

T_{CLK HS PRE}: setting by Register P3: 0x22

T_{CLK_POST}: setting by Register P3: 0x25

T_{CLK ZERO}: setting by Register P3: 0x23

T_{CLK_TRAIL}: setting by Register P3: 0x26

GC1024 DataSheet 15 / 30

5.2.2 Data Burst

Notice:

- Clock keeps running and samples data lanes (except for lanes in LPS).
- Unambiguous leader and trailer sequences required to distill real bits.
- Trailer is removed inside PHY (a few bytes).
- Time-out to ignore line values during line state transition.

T_{LPX}: setting by Register P3:0x21

CONFIDENTIAL CONFIDENTIAL
